Biography

I am experienced in conducting research as a clinician-scientist in the Psychiatry field, specialising in Psychotherapy. I have been utilising machine-learning approaches since my Intercollegiate BSc in neuroscience. I went on to complete my PhD in genetics and neuroimaging where I developed my expertise in cognitive neuroscience and psychological constructs such as personality and aspects of emotional processing. At IMH in the Mood and Anxiety department, my goal is to develop personalised treatments of mood, anxiety and interpersonal issues through the application of AI approaches. In the immediate-term, this involves developing AI-based tools for personalisation of psychotherapy and developing my expertise in applying AI approaches to clinical questions.
